

Clean Air for Patients

S300GX-MED2
HEPA and UV Air Sterilization System

Designed for nursing homes and medical clinics that want a stand-alone unit that combines UV sterilization, HEPA filtration and odor removal.

The process is done in 4 steps. First, bacteria, viruses and mold are sterilized by a germicidal UVC process, which takes place in the aluminum reaction chamber. Second, odors and chemicals are treated by UVV photo-oxidation. Third, a pleated prefilter MERV 8 protects the blower. And lastly, HEPA filtration captures particles with a diameter of more than 0.3 microns at 99.97%.

The sterilized and filtered quality air is then distributed throughout the room.

BENEFITS

- Sterilizes airborne biological contaminants, including viruses and bacteria
- Destroys chemical contaminants, odors and VOCs
- Equipped with a pre-filter and HEPA filter, effectively capturing over 99.97% of particles up to 0.3 micron in diameter
- Easily transportable anywhere in the building

FEATURES

- Patented high-intensity 'J' lamp with UVC and UVV
- 72" power cord
- Weight : 49.75 lbs
- 2-speed 220 / 300 cfm blower

WARRANTY

- Lamp(s): 2 years
- Ballast: 3 years
- Motor: 3 years

UV 'J' Lamp

Portable

Eliminates odors and chemical contaminants

Eliminates germs

Eliminates volatile organic compounds (VOC)

HEPA filter : eliminates mold in the air

Purifies up to : 4,000 sq.ft.
